

## Essence way-of-working

Looking at the Way-of-Working checklist, we estimate that we are possibly in the stage between In Place and Working Well. We established principles and foundations early in the project through the code of conduct and the structuring of GitHub as well as communication channels. We all became comfortable with working with our tools such as GitHub, Discord and LaTeX during the project.

Our main obstacle to get to the next stage is time. We need more experience working together and solving issues to be truly at ease with our tools and the group dynamic. After this assignment and the reflection of our work we should be able to reach further stages.
